Information on companies

GB BULLS

After many years of experience in commercial dairy farming and pedigree breeding, the team at GB Bulls feel that a "Profitable Cow" can only attain that status if she has produced at least fifty tons of milk calving at regular intervals and been trouble free throughout her life in the unique summer grazing and winter housing systems typical in the harsh economic environment of the UK.

All our bulls are carefully selected to give you the potential of producing this type of cow in your herd. Our pledge to you is that all GB Bulls are chosen from cow families that have achieved not just high production or high type but a combination of both. And all done in UK conditions

STERLING SIRES

We are a UK based company importing top quality genetics from around the globe. We are agents in the UK for Genervations in Canada, Genetics Australia and Osnabruck of Germany. These global partnerships allow us to offer a full range of top quality genetics, whatever your farming system.

KI SAMEN

K.I. SAMEN is a private A.I. centre in the Netherlands established in 1982. The focus of K.I. SAMEN is on practical breeding. This means that we are trying to improve the breeding by looking first and foremost to the practical conditions on the dairy farm. Our selection is rooted in cow families, which have proven themselves in the working field, not on special prepared testing grounds. This is our 'farming' approach for breeding. The cow family behind a bull has to have scored at least 2 or 3 generations VG and preferably more. Furthermore, the cows must give good milk with high components. Whenever we evaluate a cow family we look to all the family members in order to find the strong points of the family. The success is based on results on the farms. Practical proven breeding is our motto.

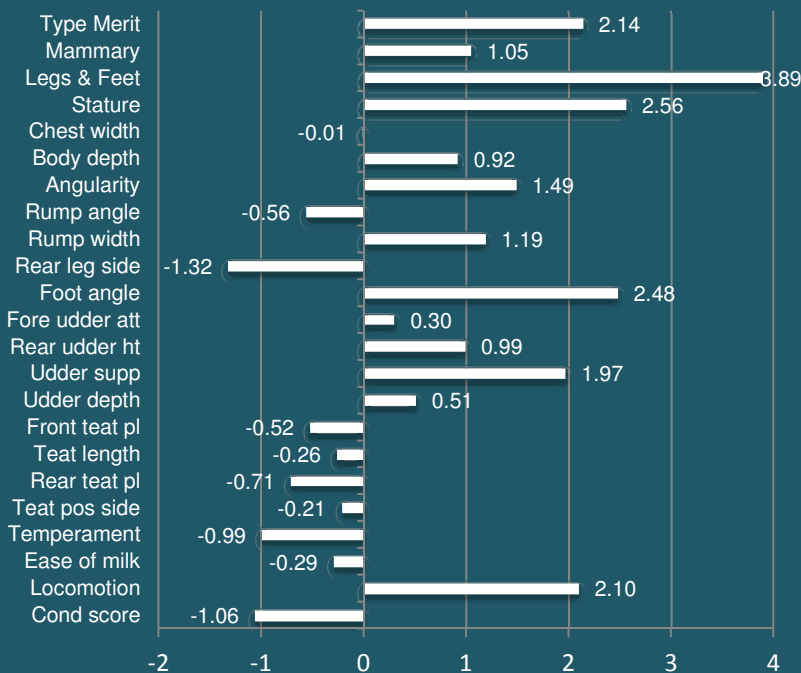

JETSTREAM GENETICS

Jetstream Genetics seeks to provide breed-defining sires through the upper echelon of genomics, whether those genetics are from deep-pedigreed cow families or high numbers, extreme type or extreme production, Red or Polled, or the very best bulls that combine these attributes. We will always seek to deliver excellence to our customers, continually giving them the tools they need to increase their rate of genetic gain.
